

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1-15. (Canceled)

16. (Currently Amended) A prefabricated resin house, comprising:

a peripheral wall formed by assembling a plurality of peripheral wall structural members comprising styrene foam; and

a roof formed by assembling a plurality of roof structural members comprising styrene foam, which is placed on top of the peripheral wall, wherein:

interlocking portions are formed at side end surfaces on both sides of each of the peripheral wall structural members and the peripheral wall structural members are bonded to each other by fitting interlocking portions facing opposite each ~~other; and other;~~

interlocking portions are formed at side end surfaces on both sides of each of the roof structural members and the roof structural members are bonded to each other by fitting interlocking portions facing opposite each ~~other; and other;~~

~~_____ a frame achieving a strengthening member of a prefabricated house is not provided.~~

each of the roof structural members is configured so that an upper end of each of the roof structural members forms an opening at a top of the roof when the roof structural members are assembled together, and a lower end of each of the roof structural members forms an interlocking portion interlocked with an upper end of one of the peripheral wall structural members; and

each of the peripheral wall structural members is configured so that the upper end of each of the peripheral wall structural members forms an interlocking portion interlocked with the interlocking portion formed at the lower end of one of the roof structural

members, and a lower end of each of the peripheral wall structural members forms an interlocking portion interlocked with an interlocking portion formed at a foundation.

17. (Currently Amended) A prefabricated resin house according to claim 16, wherein:

~~interlocking portions are formed at upper and lower end surfaces of the peripheral wall structural members and upper and lower end surfaces of the roof structural members, and the peripheral wall structural members are bonded with each other and the roof structural members are bonded with each other~~ by fitting interlocking portions facing opposite each other.

18. (Withdrawn) A prefabricated resin house according to claim 16, wherein:
the roof includes an eave projecting over a perimeter of the peripheral wall, which is formed as an integrated part thereof, and the roof is bonded to the peripheral wall by fitting an interlocking portion formed inside the eave with an interlocking portion formed at an upper end of the peripheral wall.

19. (Withdrawn) A prefabricated resin house according to claim 16, wherein:
the peripheral wall is formed so as to define a substantially rectangular parallelepiped space within the house.

20. (Withdrawn) A prefabricated resin house according to claim 19, wherein:
a ribbed structure is adopted in connecting portions at which the peripheral wall structural members are interlocked with each other and connecting portions at which the roof structural members are interlocked with each other.

21. (Withdrawn) A prefabricated resin house according to claim 16, wherein:
a frame of the prefabricated house is formed by assembling steel frame members, and the peripheral wall and the roof are assembled via the frame by individually

mounting the peripheral wall structural members and the roof structural members from outside the frame.

22. (Withdrawn) A prefabricated resin house, comprising:

a plurality of strengthening members extending in an arch from a zenith of a dome toward a foundation along meridians, which are disposed over predetermined intervals along a circumferential direction; and

an outer wall comprising styrene foam formed by stacking a plurality of structural members separated from each other along meridians from the foundation toward the zenith of the dome between a pair of strengthening members, wherein:

I interlocking portions are formed at side end surfaces on both sides and upper and lower end surfaces of each of the structural members and the outer wall is formed by engaging interlocking portions facing opposite each other and then bonding the structural members to each other.

23. (Withdrawn) A prefabricated resin house according to claim 16, wherein:

a recessed interlocking portion is formed at a bottom surface of each of the peripheral wall structural members, which is set in contact with a foundation, and the peripheral wall structural member is fixed by engaging the recessed interlocking portion onto a positioning member disposed at the foundation.

24. (Withdrawn) A prefabricated resin house according to claim 23, wherein:

the recessed interlocking portion extends along a lengthwise direction at the bottom surface of the peripheral wall structural member.

25. (Withdrawn) A prefabricated resin house according to claim 22, wherein:

a recessed interlocking portion is formed at a bottom surface of each of the peripheral wall structural members, which is set in contact with a foundation, and the

peripheral wall structural member is fixed by engaging the recessed interlocking portion onto a positioning member disposed at the foundation.

26. (Withdrawn) A prefabricated resin house according to claim 25, wherein:
the recessed interlocking portion extends along a lengthwise direction at the bottom surface of the peripheral wall structural member.

27. (New) A prefabricated resin house according to claim 16, wherein:
a position of each of the peripheral wall structural members is determined by making the lower end of each of the peripheral wall structural members contact with a member disposed at the foundation.

28. (New) A prefabricated resin house according to claim 27, wherein:
a recessed interlocking portion is formed at a bottom surface of the lower end of each of the peripheral wall structural members; and
each of the peripheral wall structural members is fixed by engaging the recessed interlocking portion onto a positioning member disposed at the interlocking portion of the foundation.

29. (New) A prefabricated resin house according to claim 28, wherein:
the recessed interlocking portion extends along a lengthwise direction at the bottom surface of each of the peripheral wall structural members.

30. (New) A prefabricated resin house according to claim 16, wherein:
the interlocking portion of the upper end of each of the peripheral wall structural members includes a recessed stage on an internal circumferential side and the interlocking portion of the lower end of each of the roof structural members includes a recessed stage on an external circumferential side .
